WORKSHOP EQUIPMENT WITH A SYSTEM

The new bicycle workshop from CYCLUS TOOLS ensures fast, ergonomic and safe working with everything well laid out and all tools easily accessible. Even where space is limited, the storage capacity for small parts and consumables is maximised. The design is highly adaptable and in tune with the ever changing requirements of the bicycle industry.

Discover the outstanding features of the new bicycle workshop system from CYCLUS TOOLS.

NEW

ONLY 0.5 square metres OF SPACE IS REQUIRED PER MODULE!

The new modules, with a depth of just 0.5 m offer plenty of storage space, wall space for hanging, work surfaces and numerous options for workshop organising.

MADE FOR EVERYONE:

The high-quality modules are suitable for both commercial and private use.

EVERYTHING FITS TOGETHER:

All modules are designed to be used together in any combination as required.

MAXIMUM STORAGE SPACE:

Fully-extending drawers, a wide range of hooks, magnetic strips, display boxes, cabinets and worktops.

EASY TO ASSEMBLE:

No drilled wall holes are needed, thanks to the fixed mounting of the tool walls onto the worktop.

GOOD TO KNOW

- Small space requirement
Surface area per module 1000 x 500 mm
- 40 mm thick worktop made of solid beech
- Drawers with full-extension runners
- Rubber mats protect the contents
- Lockable drawers and cupboards
- Cabinet for waste bins
- Attachment for more storage space and additional space for tools
- Special slot for dispenser boxes
- Magnetic strips for quick access to tools
- Various hooks and shelves
- Workshop trolley with plenty of storage space and stowage under the worktop
- Height-adjustable feet for levelling out unevenness in floors
- Segments can be positioned freely as an island
- Robust design thanks to 1.5 mm thick sheet metal
- All modules can be combined individually

Ask our employees for details.

CYCLUS TOOLS® Innovation in Biketools

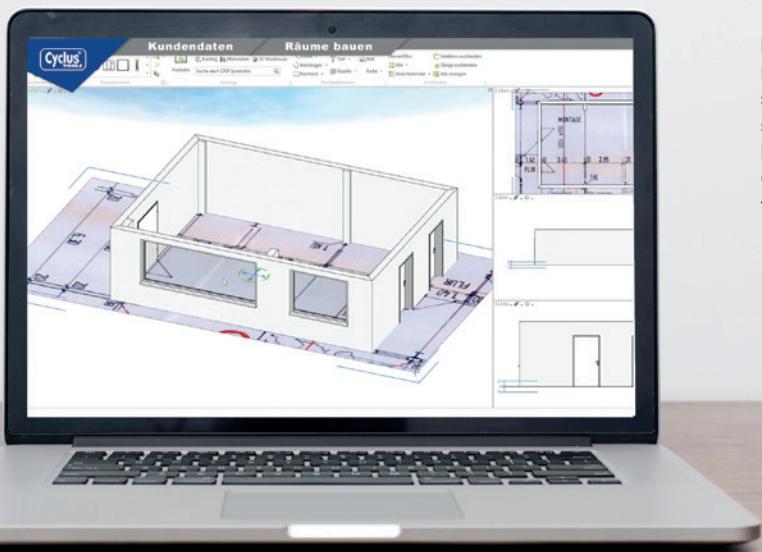

Founded in 1993, Cyclus Tools® has become one of the leading manufacturers of bicycle tools. The company focuses precisely on the needs of its customers: professional mechanics, bicycle dealers and DIY enthusiasts. In this way, it succeeds in constantly producing new "problem solvers". The goal is to achieve the best work results to the highest standards paired with effectiveness. This allows repairs to be professional and economical at the same time. Cyclus Tools® products are developed in Germany and manufactured in Europe.

On road on four wheels

The idea behind this is to bring the innovative bike tools where they are needed. The information van supports customers directly on site and we answer all questions about the tools. This gives you hands-on experience and understanding of the products. On-board we carry almost all of the tools and workshop equipment. Best of all: the info van + personnel will come to you by appointment.

Modular workshop system

It is annoying when a certain tool is needed and cannot be found. The search then costs valuable time and a repair quickly becomes unprofitable. The modular workshop system from Cyclus Tools® offers solutions for saving space, functionality and order at the workplace. To better illustrate the complex relationships in a workshop, Cyclus Tools® creates a photo-realistic visualization of the desired workshop as required. For more information, please call +49 36203 614 31

Tips from professional bike mechanic Holger

Holger, a trained and experienced bicycle mechanic, loves cycling and has a vision: "The more bikes the better". Holger has been working at RA-CO GmbH for years and has built countless INTEC bikes during this time. Assembly, repairs and custom-build projects are his areas of expertise and responsibility. He uses tools from CYCLUS TOOLS® for his work. With the experience he has gained, he has a strong influence with the designers and development team. He is happy to give tips on how to use the Cyclus range of tools professionally and effectively.

Our service

- spoke production from 1 pcs (**code 790003**)
- change of defect Campagnolo Ultra Torque and Power Torque bearings (**code 790005**)
- repair of defect or worn out facing and cutting tools
- manual wheel lacing (**code 790001**)
- tire installation, clincher or tubular

Tools & equipment leasing

Lease Cyclus Tools® bicycle tools or the complete workshop equipment!

PROFESSIONAL TOOLS

snap.in

tool system with prospects

"snap.in" is an innovative tool system that meets the requirements of the bicycle workshop in terms of: space saving, cost reduction, flexibility and sustainability. With only one holder or handle, the system is compatible with a wide range of assembly and disassembly tools, as well as the adapters for milling and cutting work. Due to its compact design, it is also ideally suited for mobile use. The use of high-quality materials, and the system retrofitting possibilities, guarantee the tool system has a long service life.

Find the right Puller for bottom bracket, cassette, e-bike motor and brake disc. Use the index number of teeth + distance.

NEW

Tools marked with this symbol are new.

EVERYTHING TURNS ABOUT HIM!

SNAP.IN - Tool system 1 holder, 1 lever, countless tools

- The plug-in system allows different variations of the tool adapters (e.g. for the removal of Sram, CAMPAGNOLO or SHIMANO cassettes)
- innovative tools for all applications
- fast, precise and safe
- guides prevent slipping
- specific requirements can be covered with special tools
- 1 Holder, 1 Lever - depending on the application

- standardized workplaces
- Workshops are easily expandable and better calculable
- the tool system fits into a case and is very well suited for mobile use
- longtime, reliable partners guarantee
- high demands on quality, dimensional accuracy
- made in Europe
- constant new and further development
- cooperation with well-known manufacturers
- all tools are tested by experts

BOTTOM BRACKET

Bottom Bracket Mounting / Removal Tool

The snap.in tool system allows all bottom bracket mounting and removal tools to be used. Suitable for:
Campagnolo, Shimano, Sram, Miche, Isis, Fsa

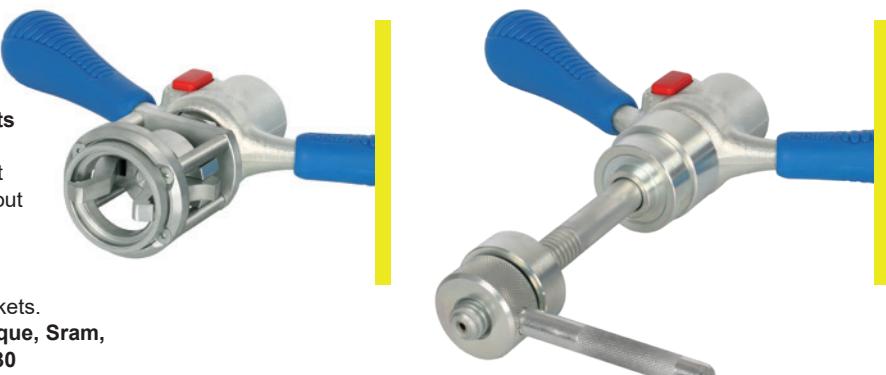

PRESSFIT

Bottom Bracket Puller Tool bottom brackets with an inner diameter of 22-30 mm

This tool is used to pull Press-Fit bearings out of the bearing cups, as well as bearing cups out of the bottom bracket shell.

Spindle, Press-Fit bottom bracket tool

For pressing in various Press-Fit bottom brackets.
 Suitable for: **Campagnolo Ultra-/ Power-Torque, Sram, Truvativ, Gxp, Shimano BB & Fsa, Fsa BB30**

E-BIKE

E-Bike Mounting / Removal Tool

For mounting work on bike electric motors. Suitable for:
Bosch or Panasonic Motor

HEADTUBE

Adjustable Milling Tool

For milling bearing seats before mounting headsets. Infinitely adjustable to enable different mounting depths to be milled.

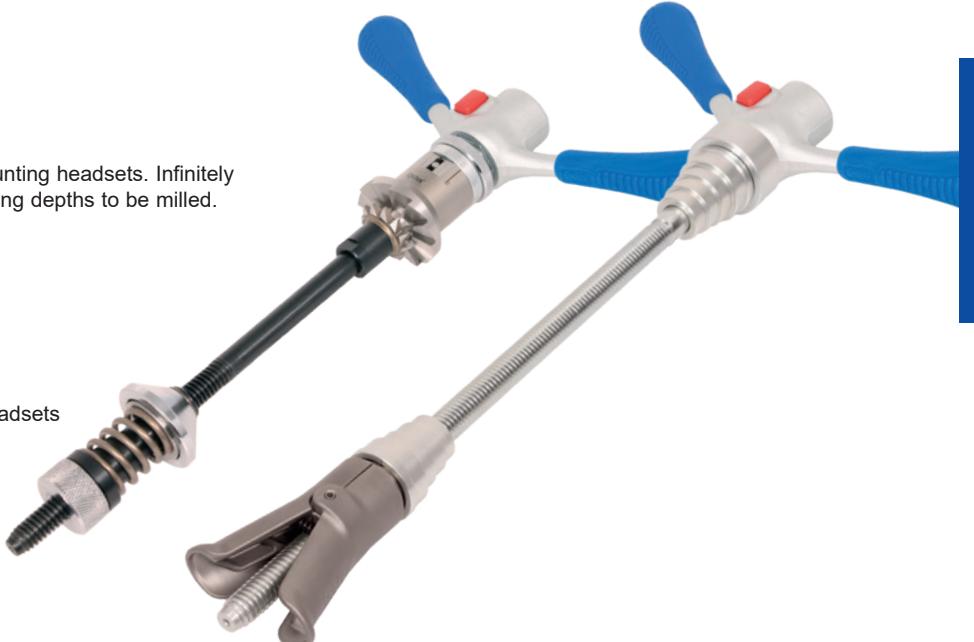

Suitable for headset types:

- "classic headset" EC
- "semi-integrated headset" ZS
- "integrated headset" IS

Head Tube Press-in Tool

For pressing in bearing shells for headsets and Press-Fit bottom brackets.

- spindle length 480 mm
- spindle length XXL 780 mm

Holger's tip

With its ball locking mechanism, the tool part and guide holder clamp securely together to make a very secure complete tool. This enables an impressively higher amount of turning force to be applied through the tool, without the risk of it slipping off the narrow locking ring.

ASSEMBLY TOOL "JETMOUNT'R"

For assembly and disassembly the lock ring from brake discs & HG cassettes.

Incl. Guide for thru axle Ø 12, 15, 20 mm

Quick release, Solid axle

code 720390

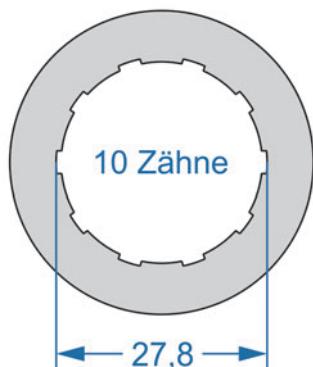

MSRP: 225,60 €

With the CYCLUS TOOLS "JETMOUNT'R" tool, the lock rings from Centerlock brake discs and HG cassettes can be mounted and dismounted quickly and safely. The corresponding insert guides ensure a secure hold on the lock ring and prevent the tool slipping off. Maximum force is guaranteed for tightening and undoing. Even extremely tight lock rings can be easily loosened with the tool handle leverage. First Mount the required tool head on the lever with the knurled nut, and then insert this into the lever. Finally insert the required guide.

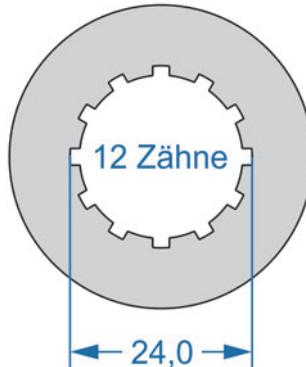

Holger's tip

The remover also fits on the lock ring Cassette Shimano

- the chased thread serves as guide for exact shells facing
- only one tool saves space

Holger's tip:

No other tool in the bicycle industry can properly combine 2 operations, cutting and facing the bottom bracket housing, in one tool. Through the exact fitting guide, both cutters and facers are perfectly in line to each other. That means, shell faces will be 100% parallel to each other and square to the threads. The threads themselves will be exactly centered to the bottom bracket housing. This way a perfect sitting of Shimano Hollowtech 2 and other bottom brackets with outer cups will be guaranteed. Besides that you dont lose time for tool changing. Important: use plenty of cutting oil during the work to increase the life cycle of the tool.

Repair Service

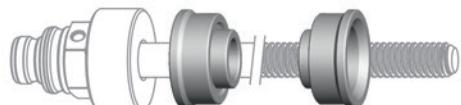

we can repair or change your torn out cutters and facer.

Tool Set

SNAP.IN ADJUSTABLE HEAD TUBE REAMER

complete set, incl. facer, one reamer to be chosen, holder and spring guide
code 7202800
MSRP: 688,00 €

With this reamer it is possible to face head tubes with various depths. The depth of the reamer is adjustable. The set up depth will be indicated on the corresponding scale. All 3 head set types can be assembled after the head tube was faced. It does not matter, whether you are going to assemble an ahead, semi-integrated or integrated head set, this tool can do all jobs. Each facer is identified by the new description system S.H.I.S. - Standardized Headset Identification System. The description code consists of the type of the headset and the corresponding head tube inner diameter (e.g: EC 34). EC stands for External Cup meaning the classic head set, ZS Zero Stack for semi-integrated head set and IS for Integrated Standard.

Scope of delivery:

- holder code 7202750
- basic tool code 7202810 (incl. adjusting screw & spring cone guide)
- head tube facer code 7202850 (outer diameter 62 mm)
- 1x inner reamer of your choice: (code 7202820-7202843)

Set

HEAD SET PRESS TOOL

1" & 1 1/8"

incl. quick release

code 720214

MSRP: 257,50 €

Info

The tool comes with quick release included, allowing faster and more effective working. Open the quick release, put it on the spindle, close and start pressing the head set into the head tube. The time consuming threading is no more needed.

The tool is constructed for simultaneous press of top and bottom headset cups into the head tube. Before doing that it is strongly recommended to check the accuracy of the cup seats inside the head tube. If needed, correct the size with head tube reamer (art. 720005/720006/720046). Use grease when pressing in!

Set thread guides M15x1, M12x1, M10x1, M8x1

Holger's tip

With the puller and repair kit can be crank arms with an internal thread M22x1 & M24x1 easily remove.
Even with a defective thread, this tool set offers a solution and the crank can still be used.
An investment that pays off.

CHAIN LINK COUNTER "CHAINCOUNT'R"

Suitable for bicycle chains

Chain widths from BMX (single-speed) to 12 speed.
code 720164

MSRP: 122,00 €

put the counter in place
and set zero

mark the chain link

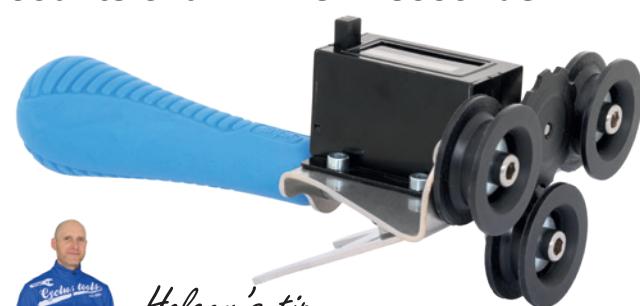

rotate the chain one round

read the number of chain links

counts chain links in seconds

Holger's tip

Why the need to count chain links?

Heavily worn chains not only hinder gear shifting, they also accelerate the wear of the chainrings and sprockets. As a result, these components will then also have to be replaced sooner. If a worn chain is replaced with a new one, the number of chain links must be counted beforehand. Measuring the chain lengths is not advised, as the worn chain will have increased in length and therefore the comparison between worn and new chain will be inaccurate. Therefore, first determine the number of links of the old chain with the chain link counter, and then count off the identical number of links from the new chain reel with the chain scraper and cut off the chain.

Flat Mount, Postmount & IS2000

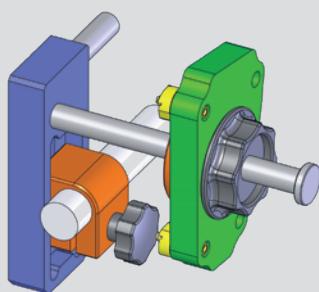

Flat Mount Front
front brake caliper mount

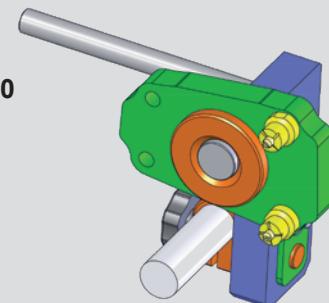

Flat Mount Rear
rear brake caliper mount

Postmount
brake disc diameter 140-203 mm
(nominal size: 5-8 inch)

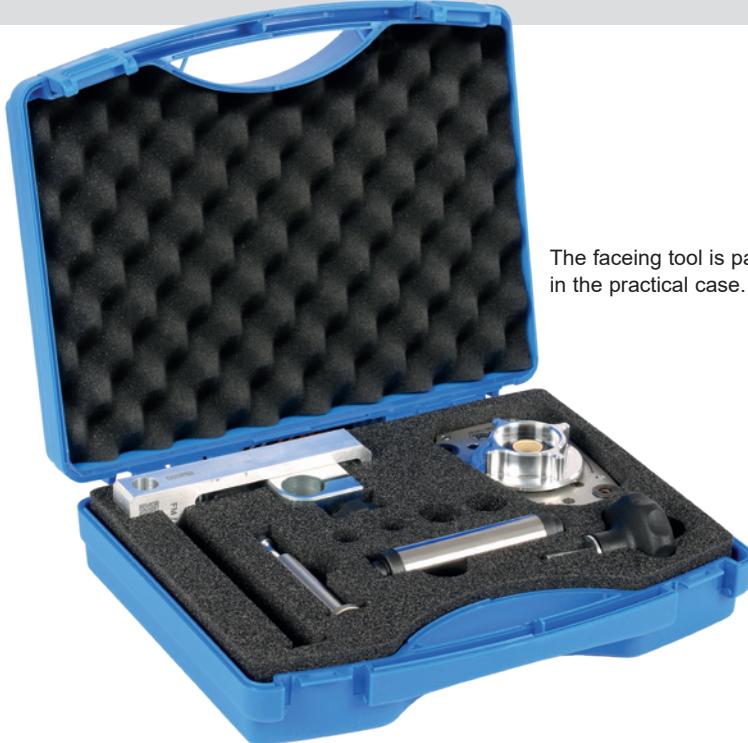

**International Standard 2000
(IS2000)**
brake disc diameter 140-203 mm

Holger's tip

CYCLUS TOOLS® dual disc facing tool faces dsic brake mounts on frame and fork of both **IS2000** and **Postmount standard**. The tool can also be applied on suspension forks. Both disc mounts will be faced simoultaneously, in 90° to the wheel axle and parallel way. The tool can be used with 20 mm axles as well. For a correct disc brake mounting it is required to have the disc mounts faced accurately.

- universally suitable due to simple cutter change and change of the clamping
- mills exactly in 90° angle
- 100% parallel disc brake mountings
- must be clamped only once
- both disc brake mounts are milled at the same time

The facing tool is packed up in the practical case.

Optional, not included in delivery.

GUIDE FRONT WHEEL QR
for multi mount disc facing tool
code 720960
MSRP: 25,70 €

GUIDE BACK WHEEL QR
for multi mount disc facing tool
code 720961
MSRP: 28,85 €

ATTENTION:
Use plenty of cutting oil to extend the life cycle of the tool.

UNIVERSAL BALL BEARING EXTRACTOR

incl. 12x adapter 6-30 mm,
exchange weight, case

code 7202900

MSRP: 990,50 €

Remove bearings, without holding up

Holger's tip

The Cyclus Tools® ball bearing extractor will remove bearings of different diameters out of frames or hubs, without holding up on them. The work is simple and fast. Sensitive materials, such as carbon, will not be affected. Two different sizes of slide hammers allow application of appropriate amount of power to the bearing. Make sure to hold and punch the hammer in axle center. Cleaning the bearing housing before work and using of silicon oil will solve also the difficult cases.

TORQUE WRENCH 5-25 NM

with switch and signalling,
300 mm, 3/8" drive
code 720116
MSRP: 92,45 €

Info

Most parts manufacturers recommend to apply a particular torque moment (Nm) on screw connections in a high-end bike. Otherwise guarantee cases could be a problem. To screw with exact torque moments, Cyclus Tools® offers two high quality torque wrenches with two different torque scales.

REVERSIBLE RATCHET

with switcher, 195 mm

With the "3D Workshop Planner" from Cyclus Tools®, Ra-Co employees can simulate a complete workshop and adapt it 100 percent to the needs of the dealer, the local conditions and the available budget.

The modular workshop system allows many design options, low space requirements provide more area for sales and clever storage options accommodate all necessary tools, short distances save working time for the staff. Tool walls are reachable from several workstations, various hooks and holding systems offer the possibility to hang tools quickly within reach, while an integrated wash station is invisible and conveniently placed.

MODULARITY:

Each workshop can be customized according to the requirements and budget.

FUNCTIONALITY:

Every tool, every care product, every component has its position. Short work distances save working time and the reduced space requirements you create more space for the sale.

AESTHETICS:

Our Cyclus Tools workshop equipment upgrades every workshop and at the same time your competence as a dealer even more.

The modular design of the workshop system allows a free design of every workspace and can be and can be customized to each employee.

MSRP: 14,95 €

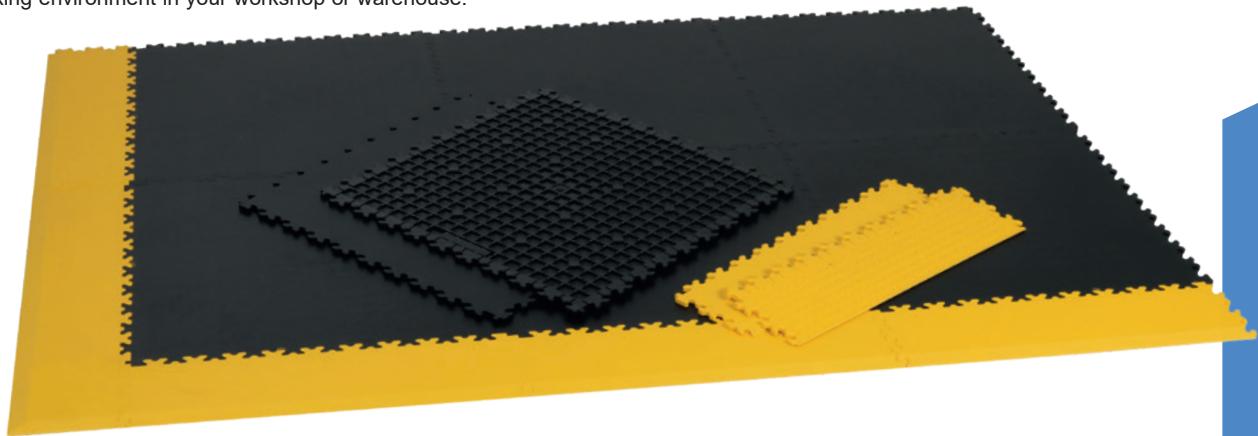

Holger's tip

These PVC floor tiles use a new puzzle interlocking system, which makes them easy to lay and lift, according to your workshop or warehouse requirements. The edge and corner strips complete the tiled floor and ensure a tidy professional installation. The tiles are made from a high-quality recycled plastic which has excellent shock absorbing, sound and heat insulating properties. This flooring system ensures a safer and more comfortable working environment in your workshop or warehouse.

PVC FLOOR

MSRP: 30,70 €

VICE

jaw width 100 mm
code 720306
MSRP: 238,00 €

Holger's tip

CYCLUS TOOLS® tube cutter is best for cutting of seat posts, handle bars and other tubes. The cutting is done quickly and clean. There is no need to fix the workpiece. The cutting is done by rotating the tool around the workpiece (e.g. fork shaft) and adjusting of the cutting wheel. Eventual burrs can be eliminated with the integrated noga blade.

- suited for alloy and steel tubes
- 4 guide rolls of stainless steel
- magnesium cast, therefore very light weight and solid
- steel spring spindle
- cutting wheel can be changed quickly, without tools
- spare cutting wheel included in the turn knob
- Noga countersink blade

TUBE CUTTER

tube diameter 3-35 mm
incl. cutting wheel
code 720309
MSRP: 62,50 €

SPARE CUTTING WHEEL
